

Performant AsyncIO daemons

Concretely for my business ?

- Handles a lot more HTTP requests with Python

Who am I ?

- A simple Telco Dev guy in a Farm:

- Some of our clients:

What is API-Hour ?

- API-Hour enables easily multiprocessing for AsyncIO daemons
- Based on Gunicorn with a custom worker
- AsyncIO + API-Hour = Performant

API-Hour philosophy

- KISS philosophy: Easy to understand and deploy
- Use AsyncIO libraries directly
- (Optional) A Starter-Kit to create quickly your HTTP/REST daemon ready for production (with system config files + Ansible playbook)

Future

- API-Hour will participate to the biggest Web Framework Benchmark (90+ Web stacks compared):
<https://www.techempower.com/benchmarks/>
- Integrate API-Hour worker in Gunicorn
- UDP support
- Implement new server protocols for AsyncIO
