# Performant AsyncIO daemons

Concretely for my business ?

- Handles a lot more HTTP requests with Python

Who am I ?

- A simple Telco Dev guy in a Farm:

- Some of our clients:

What is API-Hour ?

- API-Hour enables easily multiprocessing for AsyncIO daemons

- Based on Gunicorn with a custom worker

- AsyncIO + API-Hour = Performant

API-Hour philosophy

- KISS philosophy: Easy to understand and deploy

- Use AsyncIO libraries directly

- (Optional) A Starter-Kit to create quickly your HTTP/REST daemon ready for production (with system config files + Ansible playbook)

Future

- Integrate API-Hour worker in Gunicorn

- UDP support

- Implement new server protocols for AsyncIO
